

Fi2000**Fi2000 POWRPRO BLACK**

- Requires no dyno-tuning – plug it in and ride
- PowrPro Black analyzes, tunes and adjusts your air/fuel ratio for peak performance instantaneously
- Tunes acceleration fuel delivery in every gear for peak performance
- Works with stock or modified engines, air cleaners and exhaust systems
- Can fine-tune the non-acceleration air/fuel curves using the Bluetooth® app
- Can tune engine fuel delivery in specific ranges, check rpm, read fuel injector pulse width and duty cycle, and add or remove fuel in low- or mid-range rpm

PART #	DESCRIPTION	SUG. RETAIL

All part numbers in **BLUE** are new for 2023.

Fi2000R PLUG-IN FUEL PROCESSORS

- Proven Fi2000R comes with leads that snap directly into the bike's injector bodies
- Standard open-loop design for 06 Dyna and all 07-08 models can use exhaust systems that do or do not have O₂ sensor bungs
- More advanced tuning for modified bikes
- Think of third tuning pot as an electronic main jet while thinking of the entire Fi2000R as a digital jet kit
- Full range of fuel adjustment (0-10 settings) across all rpm ranges
- Three easily identifiable lights: green – Fi2000R is adding more fuel to the air/fuel ratio approx. 14:1; green and yellow lights – these lights will be on in unison when throttle is open more quickly and air/fuel mixture is approx. 12.5:1; red – light comes on and stays on as long as the Fi2000R follows the fuel curve while adjusting to approx. 12.8:1 air/fuel ratio, which is where the engine will produce its best full-throttle power

- Step-by-step instructions
- Improves rideability by smoothing out the powerband and giving the bike more throttle response
- Corrects lean air/fuel mixture problems; eliminates overheating, hesitation on acceleration or an uneven cruising rpm
- Waterproof circuit board
- No fuel map adjustments or computer downloads required

1020-3383	Repl. O ₂ Sensor Eliminator kit	92-1100R 29.95

Fi2000R O₂ FUEL PROCESSORS

- The Fi2000R O₂ digital fuel processor is designed to work with all H-D exhaust systems (stock or aftermarket) equipped with oxygen sensors in place (closed-loop design)
- Works much like a carburetor jet kit with adjustments similar to the air-mixture screw, the needle and clip positions and the main jet
- The Fi2000R increases horsepower and torque by optimizing stock lean air/fuel mixtures (helps cool the engine temps as well)
- Quick and simple installation with plug-and-ride technology with OEM-style connectors
- No confusing computer downloads to install

- No expensive dyno-testing required
- Pre-configured from the factory for your make and model, but easy to adjust should your specific application need it
- Improves overall rideability

Low-Speed Screw
This control functions similar to the air mixture screw on a carburetor, controlling off-idle fuel demands and steady cruising.

Mid-Speed Screw
This is the equivalent of the needle and clip position on a carburetor. Two increments correspond to dropping the clip on a needle one position. One increment is the same as adding a shim. This is where you get the proper fuel mixture under load and acceleration.

High-Speed Screw
This is the electronic counterpart to your main jet. Each numbered increment is the same as going up one main jet size starting with the stock size at zero. This adjusts your fuel at full throttle.
